

Scribe Features

Everything a scribe can do on Veloce, on top of full student access.

Becoming a scribe

- Apply from the student dashboard — every application is reviewed and approved by an admin before upload access is granted
- A role change (student to scribe, or scribe to admin) takes effect on your next login

Uploading notes

- Create a brand-new course/block, or upload into an existing one
 - Every block needs at least 3 topics defined up front, shown to students before they buy
- Every upload is automatically screened before going live
 - A completeness check on the extracted text
 - A duplicate-detection check against every other live note at your university
 - Your very first upload is always sent to manual admin review, regardless of what the automated check finds
- A note that passes automated screening goes live immediately; a flagged one waits for an admin decision
- Multiple scribes can upload competing versions of the same block — students choose based on rating and trust level

The demand feed

- A ranked feed of student-requested blocks that don't have notes yet, sorted by real vote demand
- Optionally fulfill a request when you upload
 - Everyone who voted for it automatically gets a discount on your version, and gets notified the moment it's live

Reputation & trust

- A tiered trust level, computed from your sales volume, average rating, and moderation history
- Your trust badge is shown wherever your name appears — block listings, your public profile, and reviews
- An analytics page tracking your progress toward the next tier, including anything currently capping you below it
- Followers — students who follow you without necessarily having bought anything — are notified automatically every time you publish a new note

Earnings & payouts

- A running total of earnings and how much is currently available to withdraw
- Request a withdrawal to a linked bank account
 - Paid out via a real bank transfer once an admin approves the request
- A sale's earnings are reversed automatically if that purchase is later refunded or disputed

Notifications

- Notified when your request-fulfillment note gets bought by someone who voted for it
- Notified if a sale of yours is refunded or disputed, and exactly how much was reversed from your earnings
